Stamped Concrete
Since 2002

SUBCONTRACTORS | CONSULTANTS

INTRODUCTION

De-Concrete is a company specialized in decorative concrete systems for both vertical and horizontal applications. With an experience that goes back in time to the year 1994 under other company's name, De-Concrete decided to have its own identity by registering its name officially in 2002. Since that year on, De-Concrete proved to be a professional company working in the field of stamped and decorative concrete.

De-Concrete earned the confidence of its clients which made it the most recommended company in its fields through out the Lebanese market. As a matter of fact, De-Concrete started achieving approximately 70,000 sqm in its first 2 years and ended achieving 250,000 sqm in the year 2010 & above through out the Lebanese territories for both public and private sectors.

De-Concrete Systems transform ordinary concrete into extraordinary, beautiful and durable building materials. The engineered systems address specialized requirements for interior, exterior and vertical uses with a compatible range of coloring admixtures, floor hardeners, color cementitious toppings, overlay texturing tools, as well as comprehensive technical support.

De-Concrete relies on research and development so that it maintains what it has achieved and what it aims for. Moreover any new product displayed in international fairs, and adequate for the Lebanese market, De-Concrete will be the first in applying it.

De-Concrete expertise labour-ship uses top quality products to guarantee the final results. Nevertheless the prices De-Concrete offers are very competitive with respect to the quality it produce.

De-Concrete invites you to visit its offices at the Gardenia Center, Hazmieh - Lebanon.

APPLICATIONS

- Assembles and prepares the site with all necessary equipments.
- Prepare the slab's form according to topographical slopes and levels submitted by clients.
- Supply and install 25x25 meshed steel bars of 8mm in vehicular areas and 6mm in pedestrian areas.
- Supply and cast concrete of 10cm maximum average thickness in vehicular areas and 8cm maximum average thickness in pedestrian areas (350kg/m³) with additives like polypropylene fiber hair.
- Supply and apply De-Concrete Color Hardener, which is a special product that hardens the surface against abrasions and that gives color to the freshly poured concrete.
- Float and then trowel the surface of the fresh colored concrete.
- Supply and apply De-Concrete release agent, which is a special powder that gives the antique and artistic look of the concrete.
- Apply the right and professional stamping or troweling on the concrete slab.
- Apply the professional washing method & touch up if required.
- Apply and install the final layer of acrylic based sealer, after some days, to preserve the slab from different kinds of damage.

1- Ready-Mix delivered on site

2- Dry Shake method to spread evenly the color Hardener on concrete wet surface

3- Color Hardener should be well spread by bull-floating it.

4- Float and the trowel the surface of the fresh colored concrete.

5- Applying Release powder.

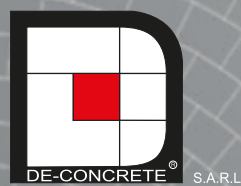

6- Stamping Concrete.

7- Washing Concrete.

8- Applying Acrylic Based Sealer.
